Mission and Solution

The growing pace of crime in suburban residential complex enforces families to explore various surveillance system options. Cost effectiveness and ease of installation are two of the most important factors influencing the final decision.

We propose a solution that strongly relies on network cameras manufactured by the worldwide leader in this area: **Axis Communications**, and its free video manager software: **AXIS Camera Companion** (ACC), which allows all video to be recorded on SD memory cards inside the cameras; so eliminating the need for a central DVR, NVR, PC or server. For small budget conscious homeowners, the **ACC** software provides a cost-saving opportunity to view live or recorded video, free of charge.

Result

The whole family is able to sleep easier now knowing that their home is under 24-hour surveillance. They are able to log on to the network cameras from the comfort and safety of their upstairs bedroom, using an application on their iPad or iPhone. With the recent decision to start a family, there is a sense of relief that the baby will have a much more secure place to come home to.

Benefits

- The importance of a secure home becomes even more pronounced when children are brought into the equation. Often families want a solution that it is capable of effectively monitoring the interior as well as the exterior of their house. This makes it possible to keep an eye on the activities within the home, even from a remote location via Web, while still maintaining a close watch over potential threats or incidents outside the premises.
- Households demanding up to 16 cameras are benefitted from the free VMS surveillance software: AXIS Camera Companion, making each camera an independent surveillance device. It can be used from a computer, iPad, iPhone or Android, locally or remotely.
- The indoor tiny wireless cameras combine functionality, a smart design and best-in-class image quality with an affordable price tag, and makes the installation a very easy step. For indoor use there are some models of Covert cameras that are proper for special requirements.
- The outdoors cameras, very important to consider, allow to deter intruders, monitoring the rear of the home, the main entrance and/or the garage gate. There is a broad set of camera models that meet all critical requirements for outdoor surveillance (vandal-proof, day & night, PTZ capabilities, IR viewing, etc.). For indoor use or for some special applications (for instance for supporting ATM tellers), there are models that are proper for Covert use.
- The ability of this system to record for up to five days has already proved to be extremely practical. If it is a system no bigger than 4 cameras, allows the possibility to record for up to a month period.
