Mission and Solution

The growing pace of crime in urban areas are enforcing enterprises to explore various surveillance system options. Cost effectiveness and ease of installation are two of the most important factors influencing the final decision.

Our solution strongly relies on **very high quality network cameras**, from the **worldwide leader** in this area: **Axis Communications**, and on the AXIS suite of **VMS** (video management software), which allows the viewing of live or recorded video, and store all videos on SD memory cards inside the cameras, or over Hard Disk of your PC-server. For systems larger than 16 cameras we offer the software **AXIS Camera Station (ACS)**.

Result

The warehouse owners are able to sleep easier now knowing that their inventories are under 24-hour surveillance. They are able to log on to any of the network cameras from the comfort and safety of their homes, or from any place of the world with Internet availability, with the power of Live monitoring, and retrieve videos previously recorded, using an application on their iPad, iPhone, smartphones or using web-browsers on PCs.

Benefits

- The importance of a secure Warehouse becomes even more pronounced during periods of vacations and holidays. Often Owners wants a solution that it is capable of effectively monitoring the interior as well as the exterior of their properties. This makes it possible to keep an eye on the activities within the warehouse, even from a remote location via Web, while still maintaining a close watch over potential threats or incidents outside the premises.
- For small budget conscious owners, demanding up to **16** cameras, are benefitted from the **free** VMS surveillance software: **AXIS Camera Companion (ACC)**, and when it is combined with the use of SD cards into the cameras, makes each camera an independent surveillance device. It can be used from a computer, iPad, iPhone or Android, locally or remotely; so eliminating the need for a central DVR, NVR, PC or Server.
- The indoor tiny **wireless** cameras combine functionality, a smart design and best-in-class image quality with an affordable price tag, and makes the installation a very easy step. For indoor use there are some models of Covert cameras that are proper for special requirements.
- The outdoors cameras, very important to consider, allow to deter intruders, monitoring the rear of the warehouse, the main entrance and/or the garage gate. There is a broad set of camera models that meet all critical requirements for outdoor surveillance (vandal-proof, day & night, PTZ capabilities, IR viewing, etc.).
- If it is a system no bigger than **4** cameras, and with SHDC cards of 64GB capacity, allows the possibility to record for up to a month period.
